

Sublithin® Soft Digital Media

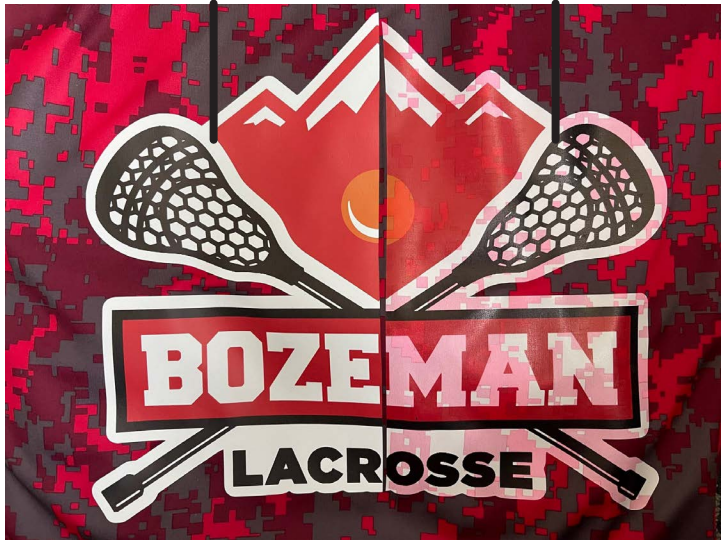

Sublithin Soft is a printable HTV designed to block dye migration from sublimated polyester garments, such as sport jerseys. Although slightly thicker than its predecessor, *Sublithin Soft* is less rigid, leading to an overall softer feel. *Sublithin Soft* also contains a charcoal-colored backing instead of white. *Sublithin Soft* is compatible with Solvent, EcoSolvent, and Latex printers. TTD High Tack Mask is recommended for application.

Application Instructions

1. Print and cut design based on recommended material
2. Weed excess material from your design
3. Mask your design with the recommended TTD Mask
4. Squeegee masked design starting from the middle of the design to the edge
5. Peel the design from the paper backing
6. Apply design based on the recommended application settings

Sublithin Soft
(no dye migration)

Other Digital Media
without dye blocker
(red dye migration)
